Environmental Protection Policy

Preamble

Stranger GmbH & Co KG develops and manufactures systems in the fields of mechanical engineering, robotics and automation. As a technology-driven company, we are aware that industrial activity is always linked to the use of energy and resources.

Our aim is to combine economic success, technical innovation and a responsible approach to the environment.

We see it as our responsibility to reduce environmental impact as far as possible, use resources efficiently and continuously improve our processes. In doing so, we take environmental aspects into account throughout the entire life cycle of our projects – from planning and manufacturing through to the operation of our systems at the customer's site.

Our aim is to develop sustainable solutions that make sense both ecologically and economically and contribute to securing Europe as a production location in the long term.

At Stranger, responsibility for environmental protection lies with both the management and all employees. This policy serves as a guide for our daily actions and defines the principles of our responsible approach to the environment and resources.

Stranger is committed to complying with all relevant legal requirements as well as other binding obligations in the field of environmental and resource protection.

Environmental Policy

Stranger GmbH & Co KG

Version: 1.1
Effective Date: January 1, 2026
Approved by: Management

Revision history

Version 1.0

First edition of the Environmental Policy.

Version 1.1

Expansion to cover requirements from OEM Supplier Sustainability Ratings. Additions regarding energy, emissions, resource management and environmental aspects in the supply chain.

Energy Efficiency and Responsible Energy use

A key component of our environmental commitment is reducing energy consumption and continuously improving our energy efficiency.

As part of our operational processes, we implement measures that help to reduce energy consumption and emissions.

These include, amongst others:

- The use of energy-efficient technologies in production and building services
- The use of modern lighting systems (e.g. LED)
- Ongoing monitoring and optimisation of energy consumption in production and the office
- Increased use of digital communication to reduce travel costs
- Efficient planning of production processes to avoid unnecessary energy consumption
- The operation of a photovoltaic system on the roof of the company building, which covers part of the electricity requirement from renewable energy sources
- The use of electric vehicles within the company fleet to reduce emissions in the area of business travel

Every employee can also contribute in their day-to-day working environment. We therefore encourage mindful behaviour when it comes to energy use, for example by:

- switching off lights and equipment when not in use
- using heating and air-conditioning systems efficiently
- increasing the use of digital documentation instead of paper

Natural Resource Management

As a specialist engineering company, we use a variety of materials, consumables and operating supplies.

Our aim is to use these resources as efficiently as possible and to avoid unnecessary consumption.

We pay particular attention to:

- efficient use of materials in design and manufacturing
- careful project planning to avoid material wastage
- resource-efficient use of water, energy and consumables
- preferential use of durable and low-maintenance components

Through innovative automation solutions, we also support our customers in making their production processes more efficient and resource-friendly.

Waste Prevention and Responsible Disposal

Waste prevention is a top priority for Stranger.

A waste management plan has been implemented at our site to ensure waste separation, recycling and disposal in accordance with the law.

Where waste cannot be avoided, we ensure that it is properly separated, collected and disposed of.

Our principles are:

- Waste prevention right from the planning and procurement stages
- Consistent separation of recyclable materials and residual waste
- Legally compliant disposal of all waste
- Collaboration with qualified waste management companies
- Promotion of recycling and reuse
- Waste management plan

Responsibility in the Supply Chain

Stranger Maschinenbau works with a wide range of suppliers, partner companies and service providers. We recognise that effective environmental protection can only be achieved if our business partners also act responsibly.

We therefore expect our suppliers and partners to comply with applicable environmental legislation and to manage resources and the environment responsibly.

When selecting and working with suppliers, we pay particular attention to the following aspects, amongst others:

- Compliance with statutory environmental regulations
- Responsible use of energy and resources
- Proper waste management and recycling
- Use of environmentally friendly materials and processes, where technically and economically feasible

Stranger promotes open communication with its suppliers on environmental and sustainability issues and strives for continuous improvement throughout the entire value chain.

Environmental Aspects of our Products and Solutions

As a specialist machine manufacturer, Stranger Maschinenbau develops systems that automate, stabilise and optimise production processes.

By utilising modern automation and testing technologies, our systems make a significant contribution to resource efficiency in industrial production.

Our solutions support customers through, amongst other things:

- precise process control and reduction of waste
- efficient use of materials through stable production processes
- energy-efficient system designs
- automated quality and functional tests to ensure long-lasting products
- complete documentation and traceability of production processes

Right from the development phase of our systems, we consider aspects such as energy consumption, ease of maintenance, durability and efficient use of resources.

Our aim is to develop machines and automation solutions that are not only economically successful but also contribute to sustainable and efficient production for our customers.

Awareness and Responsibility

Sustainable environmental protection can only be achieved through the commitment of all employees.

Stranger therefore promotes awareness of environmental and resource protection through:

- Information and awareness-raising in day-to-day work
- Integration of environmental considerations into decision-making processes
- Responsible behaviour in day-to-day operations

All employees are encouraged to actively contribute to improving our environmental performance.

Continuous Improvement

We regularly review our policies and measures and adapt them to new legal requirements, technological developments and operational experience.

Our goal is to continuously improve our performance and ensure long-term compliance and sustainability.

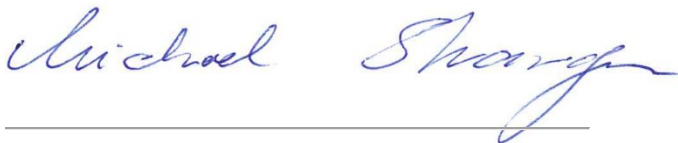

Binding Nature

This policy applies to all departments of Stranger GmbH & Co KG as well as to all employees.

All employees are required to comply with the provisions of this policy and actively contribute to its implementation.
